

## iglidur® W300 – The Marathon Runner

For especially high service life

Low coefficient of friction

Extremely high wear resistance

Also suitable for soft shafts

Resistant to dirt

iglidur® W300

Fax +49 - 22 03 - 96 49-334

## iglidur® W300 | The Marathon Runner

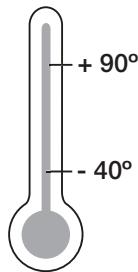

The iglidur® W300 material gives excellent wear resistance, even in harsh environments or when used with rough shafts. Of all iglidur® materials, iglidur® W300 is the most resistant to these conditions.

### Price index

## The Marathon Runner

### When to use iglidur® W300 plain bearings:

- When especially high service life is necessary
- When low coefficients of dynamic friction and high wear resistance are needed
- For use on 303 stainless steel shafts
- For harsh environments and very rough shafts
- Dirt resistant

### When not to use iglidur® W300 plain bearings:

- For high loads starting at 50 MPa
  - iglidur® Q (chapter 18)
- When temperatures are constantly above 130°C
  - iglidur® H (chapter 12), iglidur® X (chapter 6)
- For very wet ambiences
  - iglidur® J (chapter 3)
- When an economical bearing is desired
  - iglidur® G (chapter 2)
- iglidur® H (chapter 12), X (chapter 6)

Picture 5.1: By converting to iglidur® W300 the life of the bearing on this tea bag packaging machine was increased by five times

## Material Table

General Properties	Unit	iglidur® W300	Testing Method
Density	g/cm3	1,24	
Colour		Yellow	
Max. moisture absorption at 23°C / 50% r.F.	% weight	1,3	DIN 53495
Max. moisture absorption	% weight	6,5	
Coefficient of sliding friction, dynamic against steel $\mu$		0,08 - 0,23	
p x v value, max. (dry)	MPa x m/s	0,23	
Mechanical Properties			
Modulus of elasticity	MPa	3.500	DIN 53457
Tensile strength at 20°C	MPa	125	DIN 53452
Compressive strength	MPa	61	
Max. recommended surface pressure (20°C)	MPa	60	
Shore D hardness		77	DIN 53505
Physical and Thermal Properties			
Max. long term application temperature	°C	90	
Max. short term application temperature	°C	180	
Min. application temperature	°C	-40	
Thermal conductivity	W/m x K	0,24	ASTM C 177
Coefficient of thermal expansion	K <sup>-1</sup> x 10 <sup>-5</sup>	9	DIN 53752
Electrical Properties			
Specific volume resistance	$\Omega$ cm	> 10 <sup>13</sup>	DIN IEC 93
Surface resistance	$\Omega$	> 10 <sup>12</sup>	DIN 53482

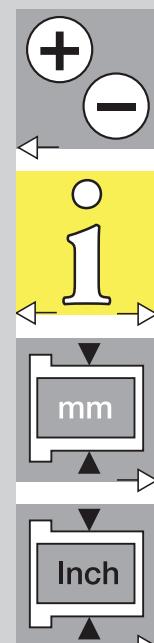

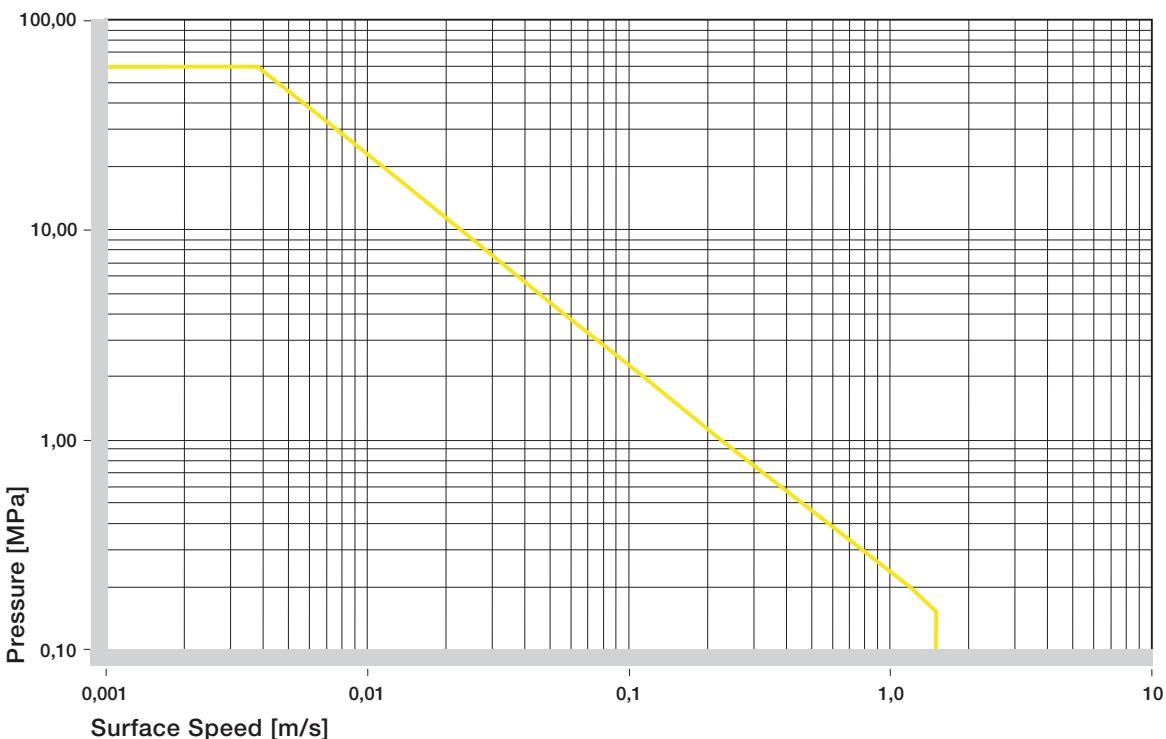

Table 5.1: Material Data

Graph 5.2: Deformation under pressure and temperature

Picture 5.4: A quote from the test evaluation: "The plain bearing with the W300 material showed no wear at all"

Graph 5.3: Recommended maximum surface pressure of iglidur W300 as a function of temperature

#### iglidur® W300    Dry    Grease    Oil    Water

C.o.f. [ $\mu$ ]    0,08–0,23    0,09    0,04    0,04

Table 5.4: Coefficient of friction for iglidur® W300 against steel ( $R_a = 1 \mu\text{m}$ , 50 HRC)

iglidur® W300 gives excellent wear resistance, even in harsh environments or when used with rough shafts. This material is the most tolerant of these external effects out of all the iglidur® range.

## Surface Pressure

iglidur® W300 exhibits a very high compression resistance in spite of its high elasticity. Graph 5.2 shows the elastic deformation of iglidur® W300 under radial loading. At the recommended maximum surface pressure of 60 MPa, the deformation at room temperature is less than 3%.

Below the recommended maximum surface pressure of 60 MPa the deformation at room temperature is virtually zero.

► Graph 5.2

► Surface Pressure, page 1.18

## Permissible Surface Speeds

Even at higher surface speeds, the coefficients of friction for iglidur® W300 do not increase. Therefore, compared to other materials, higher surface speeds can be obtained, for example, up to 1.5 m/s rotating and up to 5 m/s linear.

The bearing wear remains low when used for long periods at high speeds, due to exceptional wear resistance.

Exceptionally high speeds can be obtained with iglidur® W300 bearings on hardened shafts with the recommended surface finish.

► Surface Speed, page 1.20

►  $p \times v$  value, page 1.22

## Temperatures

iglidur® W300 plain bearings show minimal reaction to environmental effects. This also applies to temperatures. iglidur® W300 bearings maintain their exceptional wear resistance even up to the highest permissible application temperatures and at the same time resist becoming brittle at low temperatures.

On the other hand, the mechanical properties at high temperatures limit the application of iglidur® W300. Even at temperatures of 80°C relaxation of the bearing can occur. In this process, the pressfit forces of the bearing decrease to a large extent due to temperature. During re-cooling and the subsequent contraction, migration of the bearing can occur.

In order to avoid this situation, iglidur® W300 plain bearings always need to be axially secured in applications at 80°C and above.

Graph 5.3

Application Temperatures, page 1.23

## Friction and Wear

The coefficients of friction for iglidur® W300 decrease with increasing load. When running dry run against steel (Cf53, hardened and ground), friction is reduced when pressure ranges from  $p = 0.5$  to  $3.5$  MPa by approximately 25%.

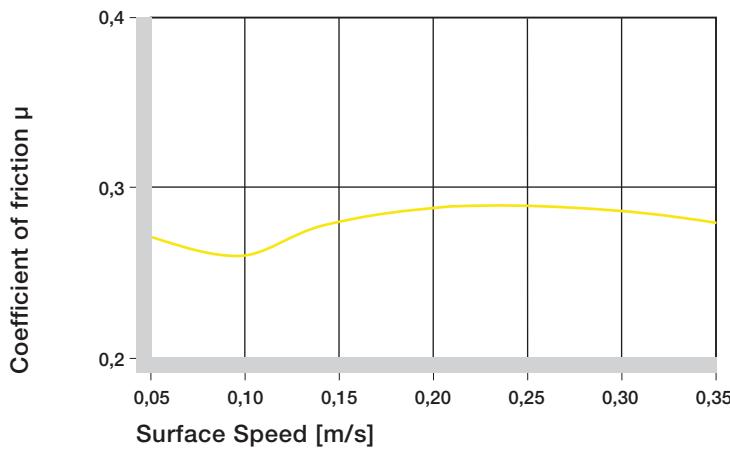

In contrast to other iglidur® materials, the coefficient of friction of iglidur® W300 remains consistently low at higher rotational speeds. Friction and wear are to a large extent also highly dependant on the shaft materials. Shafts that are too smooth increase both the coefficient of friction and the wear of the bearing. Smooth shafts have the danger of stick slip. Squeaking as an effect of stick slip is usually the result of shafts that are too smooth.

For the lowest coefficients of friction when using iglidur® W300 plain bearings, the surfaces should not be too smooth. Shaft roughnesses of 0.4 to 0.5 µm have proven to be the best (see Graph 5.6). Tests with iglidur® W300 have shown the wear resistance at this roughness is very high, while the friction reduces to the lowest value.

Graph 5.9: Wear for oscillating and rotating applications with Cf53 hardened and ground steel shafts, as a function of the pressure

## Shaft Materials

Graphs 5.7 and 5.8 show results of testing different shaft materials with iglidur® W300 plain bearings.

For rotational applications with low loads, the wear varies according to the shaft material. iglidur® W300 provides very good to acceptable coefficients of friction for all shafts that were tested. iglidur® W300 gives best results when running on hard shafts. For small radial loads with hard chromed shafts and/or shafts made of stainless steel, iglidur® W300 is the most suitable iglidur® material.

The soft shaft materials HR carbon steel and free-machining steel are not as well suited to iglidur® W300 plain bearings.

Hardened shafts are preferred for applications for higher loads. Graph 5.8 clearly shows the difference in materials for increasing loads. A similar picture emerges for oscillating applications. First, for low loads, the wear for the oscillating movement lies below that of a rotation at the same load. For higher loads, the situation changes.

If the shaft material you plan to use is not contained in this list, please contact us.

- ☒ Graphs 5.7 to 5.9
- Shaft Materials, pages 1.28

## Installation Tolerances

iglidur® W300 plain bearings are meant to be oversize before pressfit. The bearings are designed for pressfit into a housing machined to a H7 tolerance. After being assembled into a nominal size housing, the inner diameter adjusts to meet our specified tolerances. Please adhere to the catalogue specifications for housing bore and recommended shaft sizes. This will help to ensure optimal performance of iglidur® plain bearings.

- Testing Methods, page 1.35

## Chemical Resistance

iglidur® W300 plain bearings have a good resistance to chemicals. They are resistant to most lubricants. iglidur® W300 is not attacked by most weak organic or inorganic acids.

The moisture absorption of iglidur® W300 plain bearings is approximately 1.3% weight in the standard atmosphere. The maximum water absorption is 6.5%. This must be taken into account along with other environmental influences.

 Graph 5.10

 Chemical Table, pages 70.1

## Radiation Resistance

Plain bearings made from iglidur® W300 are resistant to radiation up to an intensity of 300 Gy.

## UV Resistance

iglidur® W300 plain bearings are permanently resistant to UV radiation. A slight change in colour (dark coloration) due to UV radiation and other weathering effects will not significantly influence the mechanical, electrical or thermal properties.

## Vacuum

In a vacuum, iglidur® W300 plain bearings will outgas any moisture that may have been absorbed. The use of iglidur® W300 in a vacuum environment is only possible to a limited extent.

## Electrical Properties

iglidur® W300 plain bearings are electrically insulating.
