

Welcome to OSCo

15 Years of OSCo Solutions in SAP

Geometrical Similarity Search of CADENAS in the Quotation Costing in SAP®

OSCo Olbricht, Seehaus & Co. Consulting GmbH

Tattersallstr. 15 – 17 | D-68165 Mannheim | Germany

www.osco.de

Founding Year: 1996

Managing Directors: Wolfgang Seehaus

OSCo MasterData Trigger

All OSCo Business Processes are certified according to DIN EN ISO 9001:2008

Agenda

- Presentation OSCo / Company & Procedure
- Philosophy of the OSCo Quotation Costing / Master Data Generation
- Presentation of 3 scenarios
 - Costing with Assembly (based on pieces)
 - Costing with Virtual Components
 - Costing with Master Data Generation
- Integration of CADENAS and ATLAS 9000 into the OSCo Quotation Costing
 - Construction BOMs with ATLAS 9000
 - Supplier Catalogues with CADENAS
- Free Discussion

About OSCo Olbricht, Seehaus & Co. Consulting GmbH

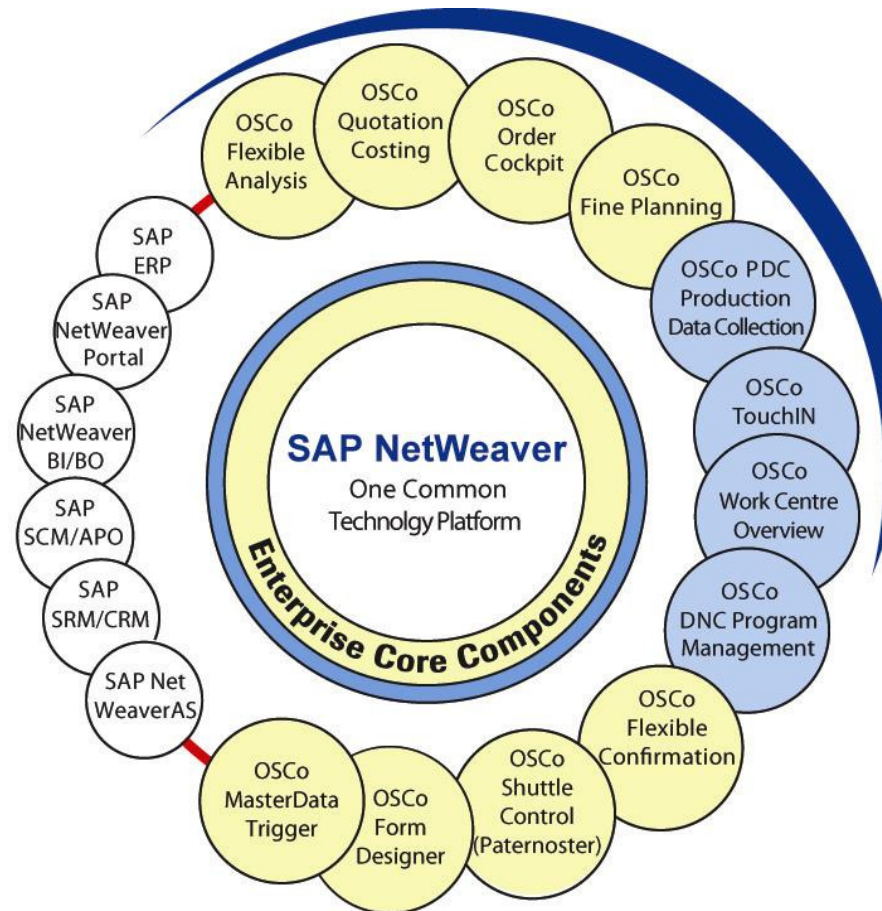

- OSCo is a consulting company and a software provider for SAP solutions, specializing in the **production industry**
- OSCo is SAP Service Partner and was founded in 1996 by former employees of SAP
- Customer oriented development of enhanced SAP functionality and of **sets of rules** for manufacturers of products with variants – resulting in the development of the OSCo Metal Solution
- Our range of competences includes:
 - **Efficient SAP implementations** with prepared templates in Early Prototype Systems
 - **Self-developed add-ons integrated in SAP** for the optimisation of your SAP business processes
 - **Qualified SAP Consulting** and comprehensive support services

OSC Co Solutions in SAP Overview of Modules

Industry-comprehensive OSCo solutions based on SAP NetWeaver for the production and process industry

- **Completely integrated in SAP, support of SAP methods**
- In the focus stands: **high efficiency**
- **Mutually complementing modules**
- **Add-on** development (no modifications required)
- Without redundant data management and interfaces
- Adaptable by customizing, without program changes
- Reserved namespace from SAP (the OSCo namespace)
- Use in SAP ERP and / or decentralised in SAP NetWeaver

Reference Projects Worldwide OSCo Solutions in SAP

Reference Projects

- Replacement of insular solutions for preliminary costings (data inconsistencies, coordination problems)
- Target: preferably realistic costing in the quotation phase for the later product / final costing
- Advantages:
 - Data integration without system discontinuities
 - Data consistency (master data: material master, BOMs, and routings)
 - Little maintenance effort
 - Consideration of setup times and external activities during the costing

Agenda

- Presentation OSCo / Company & Procedure
- **Philosophy of the OSCo Quotation Costing / Master Data Generation**
- Presentation of 3 scenarios
 - Costing with Assembly (based on pieces)
 - Costing with Virtual Components
 - Costing with Master Data Generation
- Integration of CADENAS and ATLAS 9000 into the OSCo Quotation Costing
 - Construction BOMs with ATLAS 9000
 - Supplier Catalogues with CADENAS
- Free Discussion

Customer is about to Place an Order ...

- Am I faster than my competitors?
- Is the quotation generation efficient and transparent?
- Is it traceable later what the costing is based upon?

A quotation submits a binding promise to the interested party for a certain period regarding a service or a product with a price.

For the party tendering, a precise internal costing is a central point which considers all influencing values.

Price determination

→ decides on gain or loss

The difference between price and costs determines the

→ potential gain and also the negotiating range.

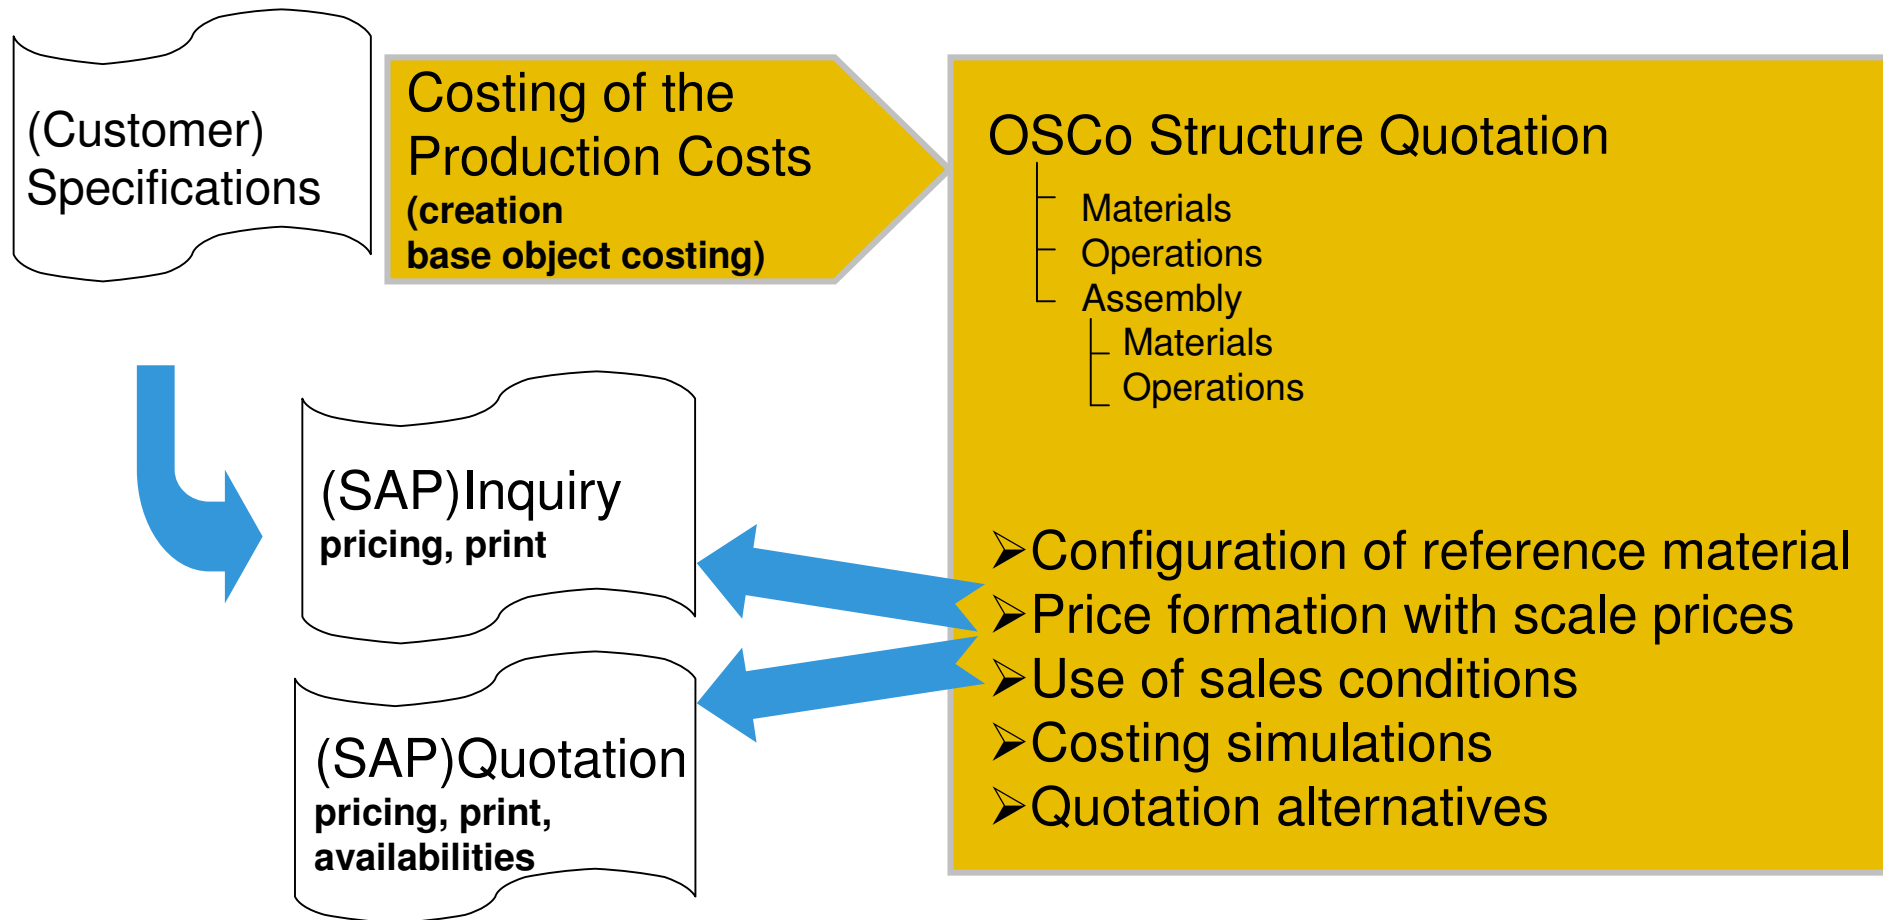

Satisfaction interested party / customer

→→ Will it become customer resp. remain customer?

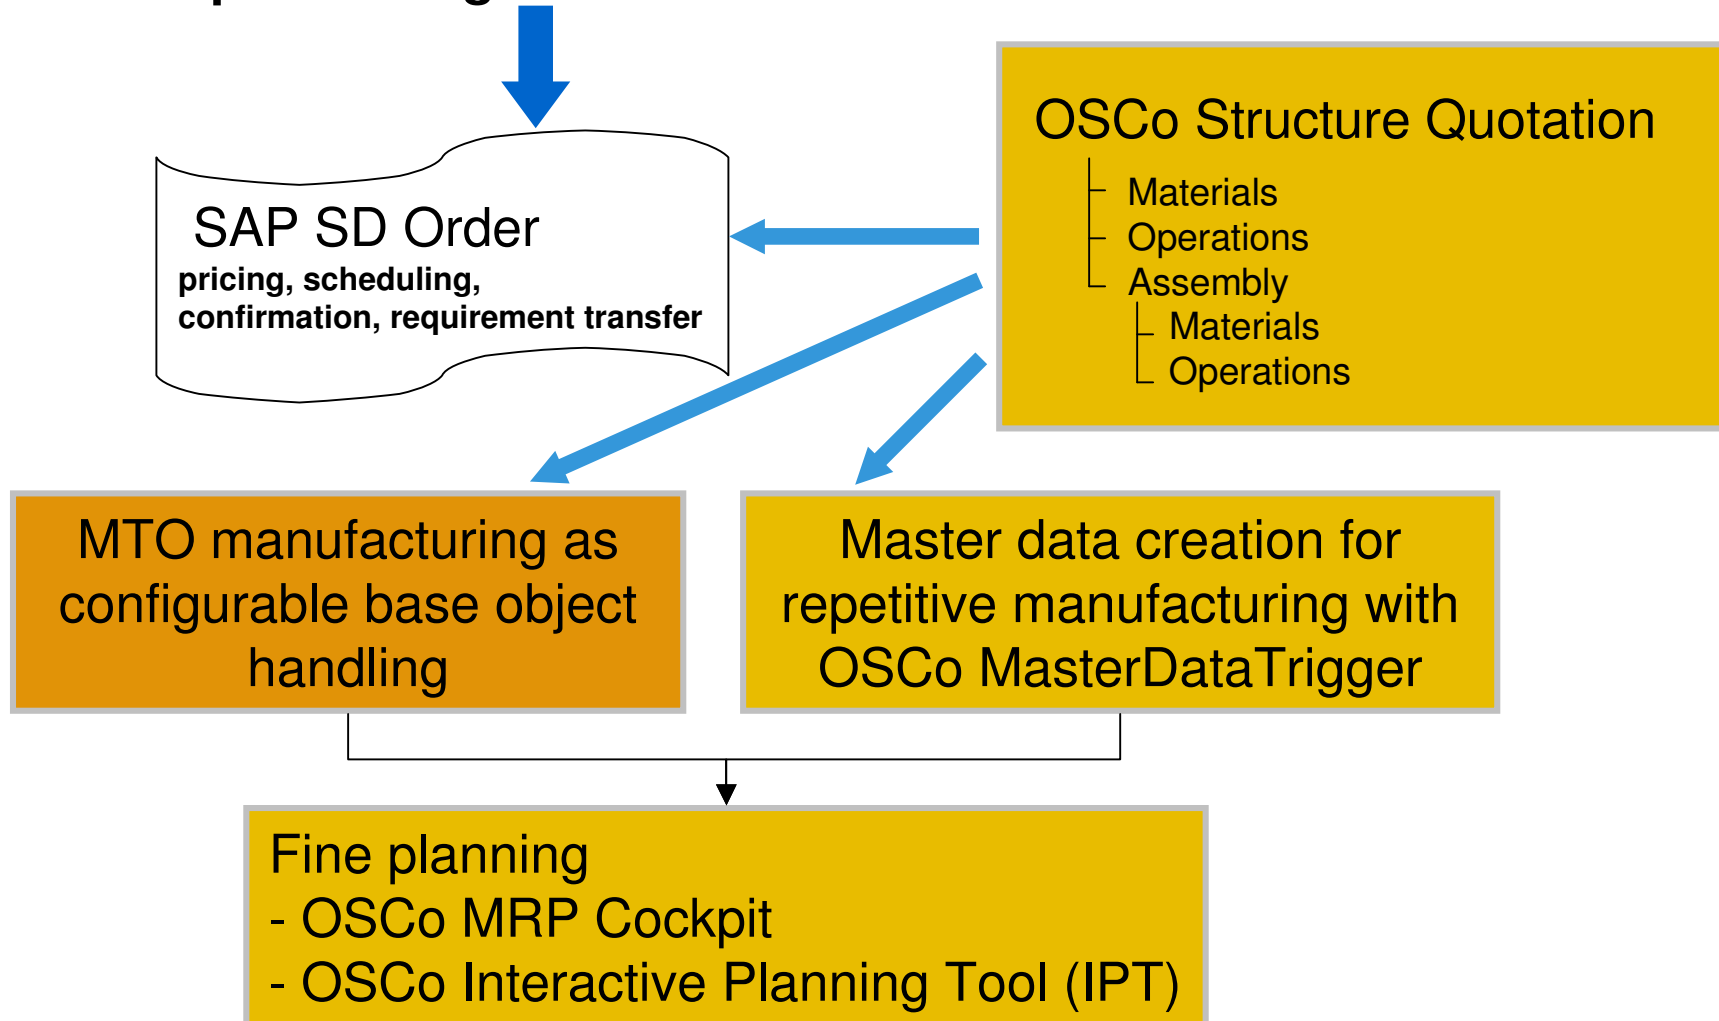

Quotation phase

Order processing

Content of the Costing

- Material costs of all product levels
- Work performance
- Provided external activities
- Overhead costs
- Further surcharges

fast

exact

flexible to generate

significant

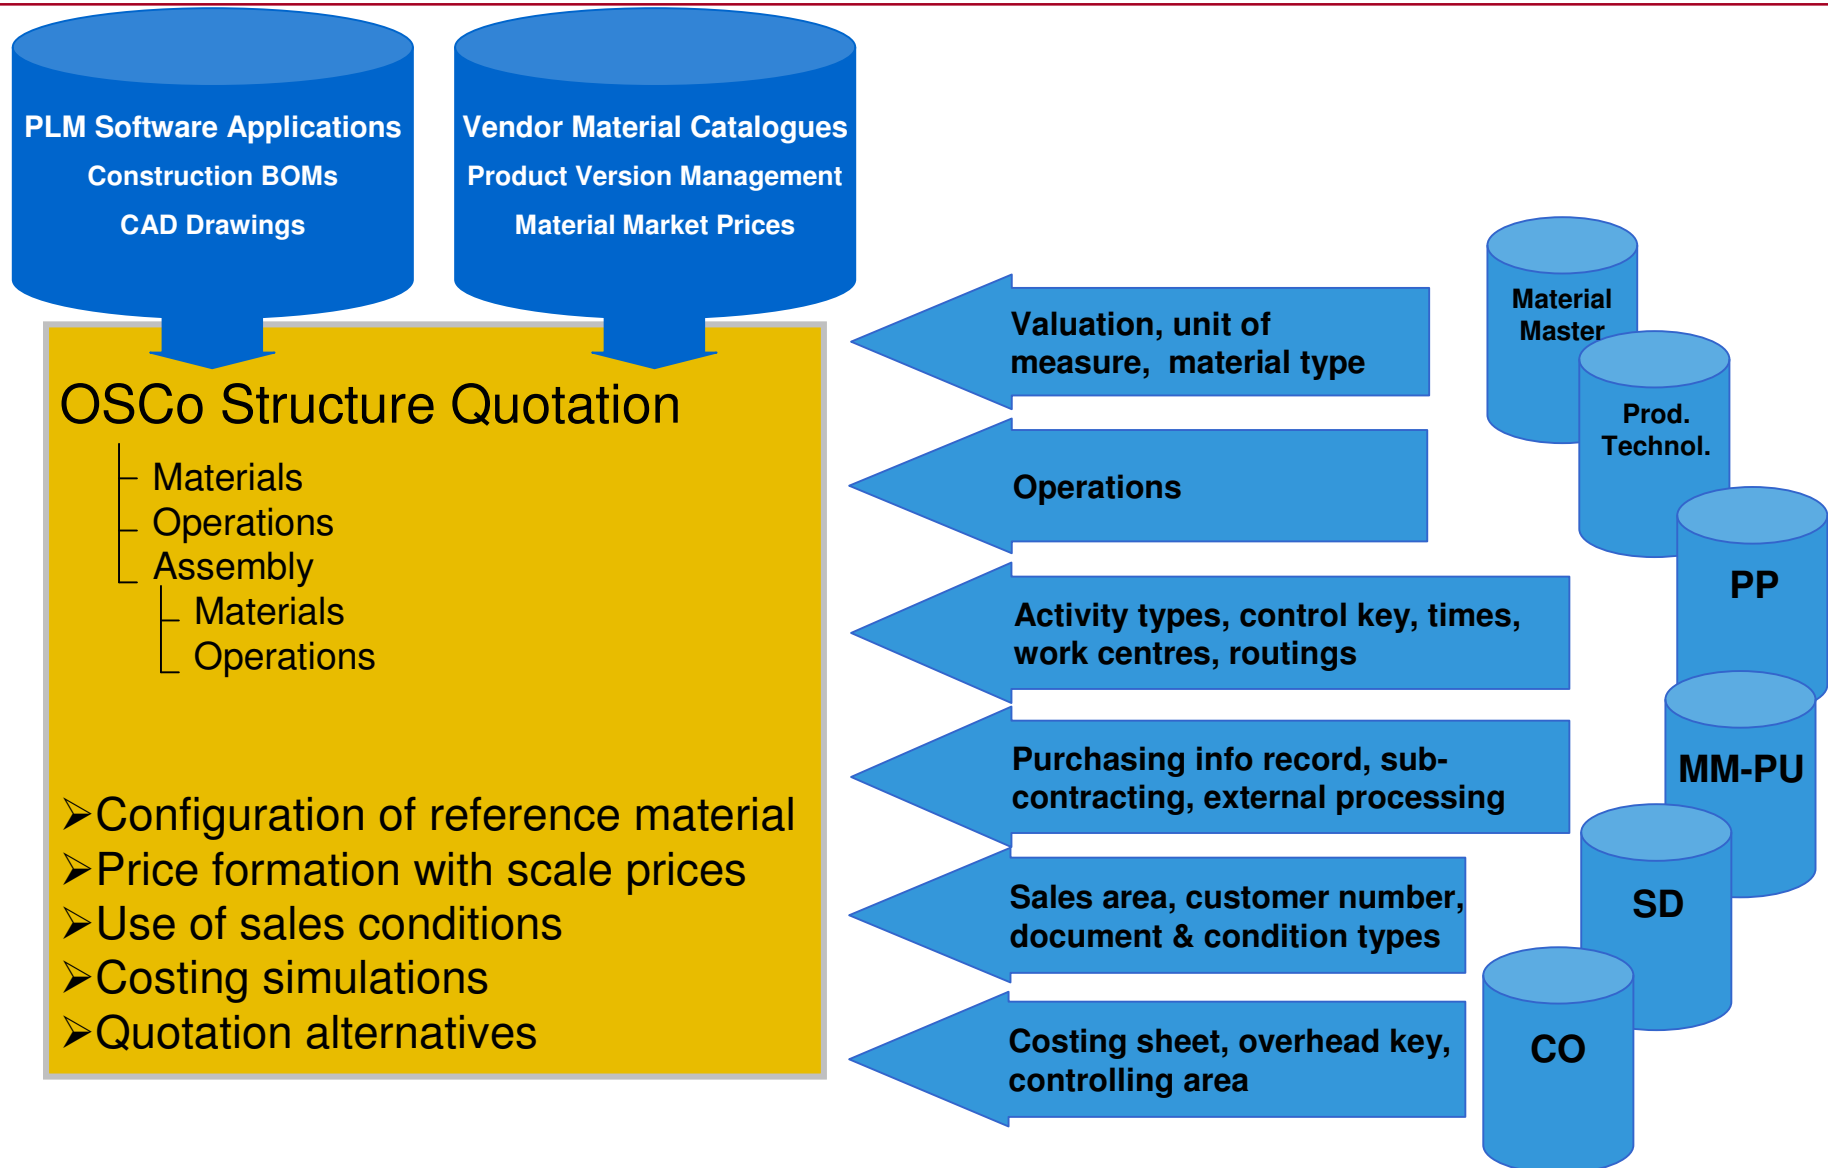

Additional Functionalities to the SAP Standard Cost Estimate

- Material needn't be created
- Input of additional data
(materials, operations, subcontracting
which can manage subcontracting provisions)
- Additional prices for the quotation
- Additional search helps
- Clearly arranged user interface
- Further functionalities executable
 - ➔ Creation of a quotation
 - ➔ Creation of a structure (BOM, routing, material)

Generation of Master Data

Agenda

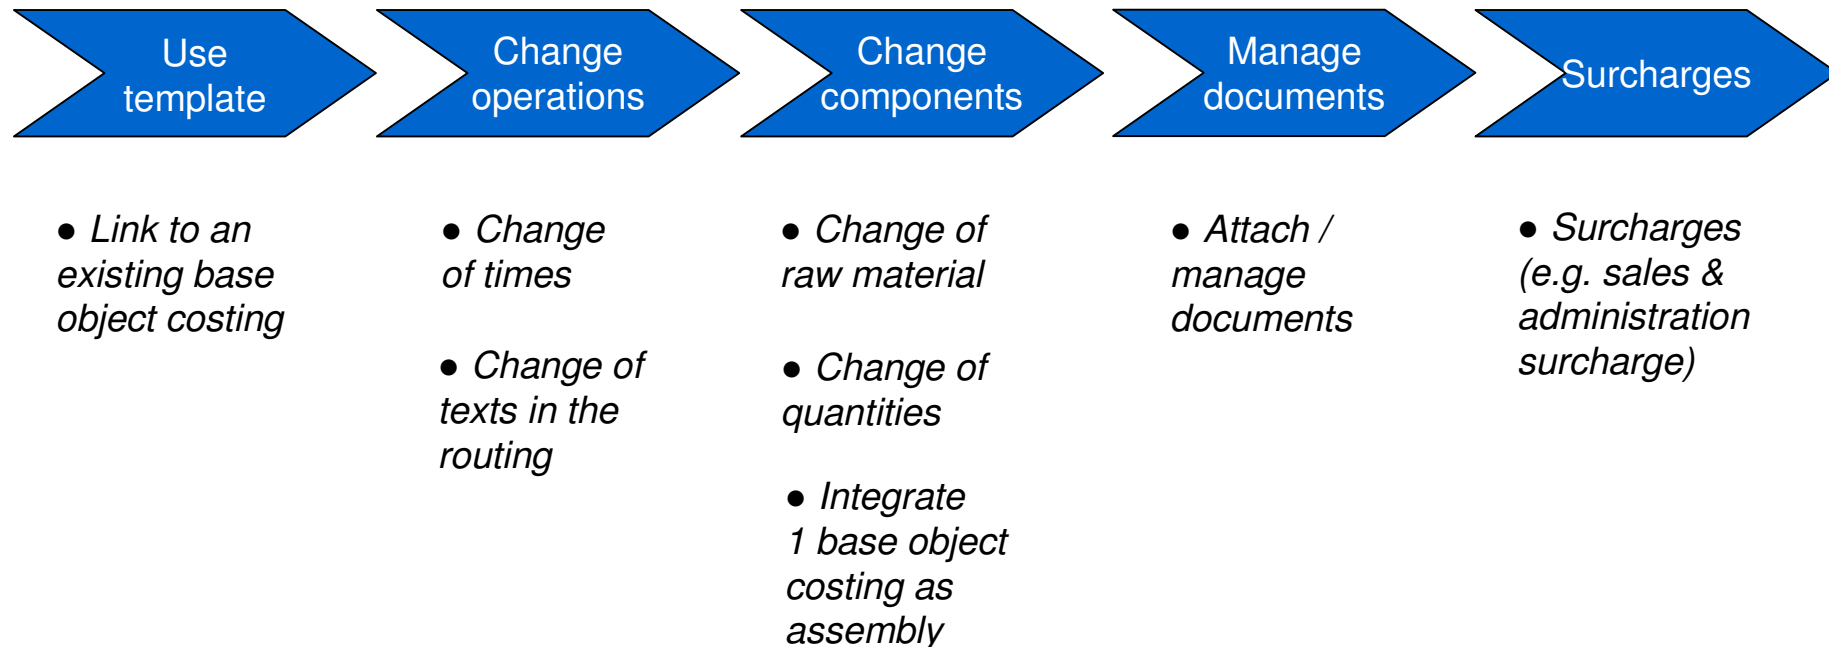

- Presentation OSCo / Company & Procedure
- Philosophy of the OSCo Quotation Costing / Master Data Generation
- Presentation of 3 scenarios
 - Costing with Assembly (based on pieces)
 - Costing with Virtual Components
 - Costing with Master Data Generation
- Integration of CADENAS and ATLAS 9000 into the OSCo Quotation Costing
 - Construction BOMs with ATLAS 9000
 - Supplier Catalogues with CADENAS
- Free Discussion

Costing Example 1

Assembly (based on pieces)

Create with template to an existing costing

Costing Example 2 Virtual Costing Structure (m²)

Create with reference to a standard routing

- *Link to an existing reference operation set*

- *Integration of subcontracting*
- *Integrate, attach, and delete*

- *Integration of a base object costing for a virtual raw material*
- *Manual price for raw materials*

- *Explain YA01 conditions in the SD pricing procedure*

- *Creation of a quotation*

Costing Example 3 with Master Data Generation (kg)

Create with reference to an existing material

- *Link to an existing material*

- *Change of 1 raw material*

- *Change of quantities*

- *Change of times*

- *Change of sales texts*

- *Create versions for scale quantities*

- *Create quotation for scale quantities*

- *Create material structure*

- *Create order with reference to the quotation*

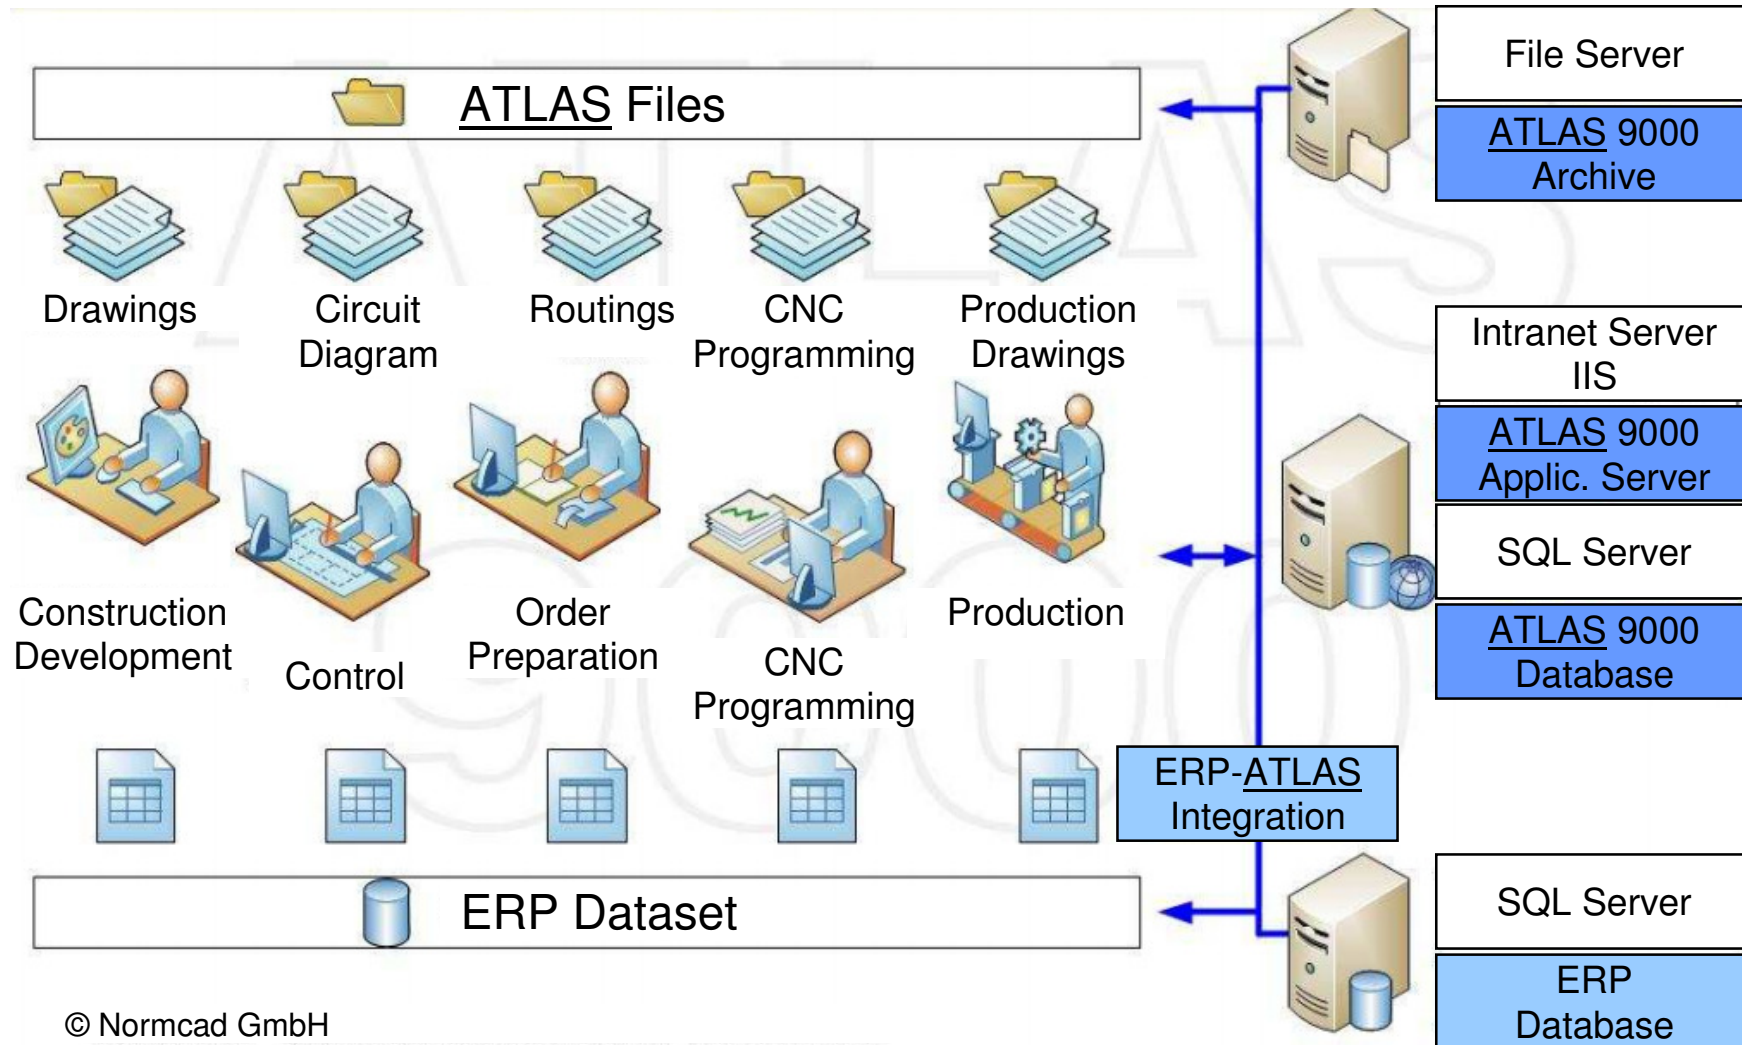

Agenda

- Presentation OSCo / Company & Procedure
- Philosophy of the OSCo Quotation Costing / Master Data Generation

Atlas 9000: Supported Company Areas

ATLAS 9000

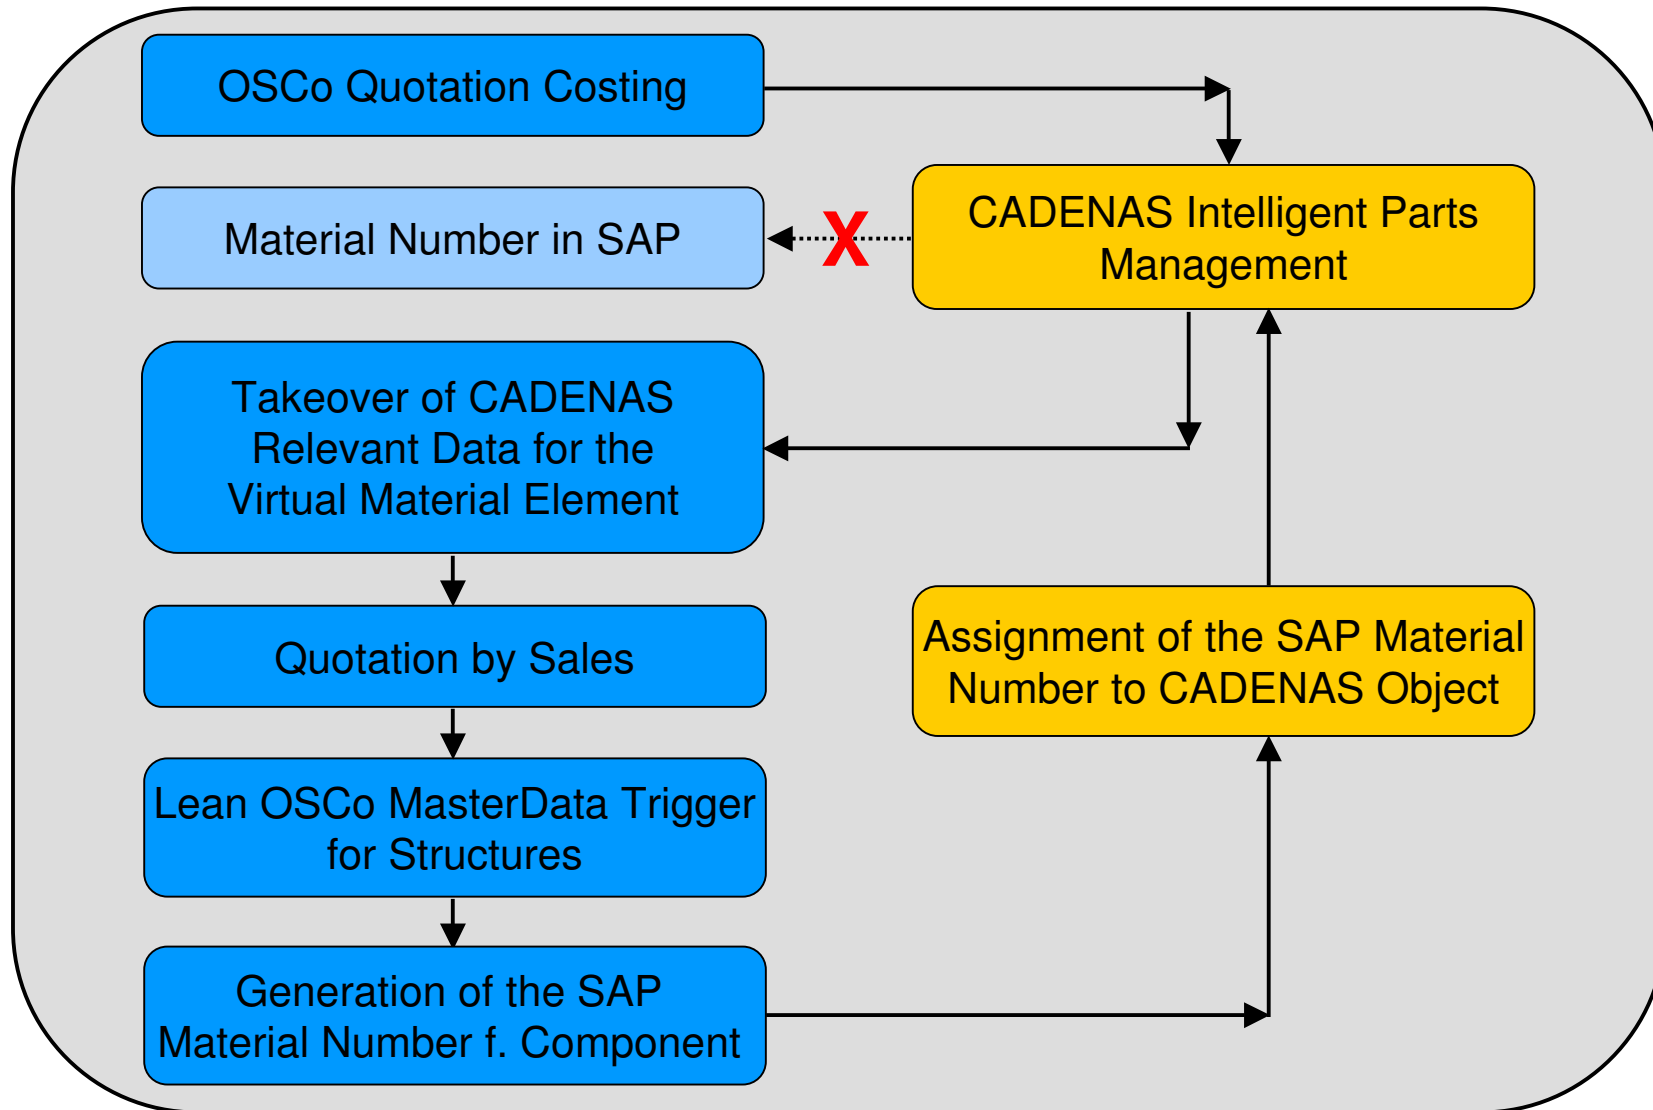

Integration of CADENAS Solutions Scenario A

Integration of CADENAS Solutions Scenario B

Advantages of CADENAS in the OSCo Quotation Costing

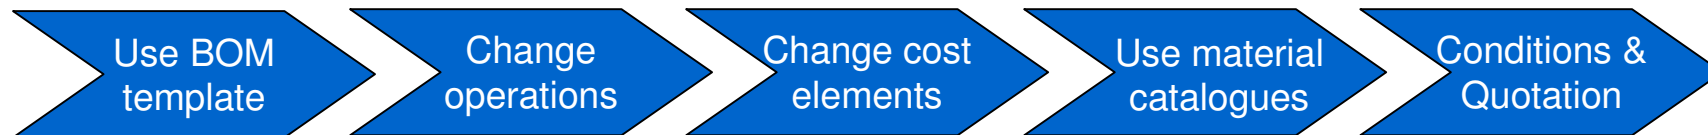

- Fast finding of parts by integration of Intelligent Parts Management Systems and Electronic Product Catalogues
- Geometrical Similarity Search of CAD parts, thus finding of alternatives and avoiding of duplicates
- Consolidation of suppliers and parts

Cost reduction already at the beginning of the construction process

Creation with reference to a construction BOM from ATLAS 9000 and connection to CADENAS material catalogue

- *Link to an existing material from ATLAS 9000*

- *Integration of a Reference Operation Set*
- *Integration of a Work Centre*

- *Base object costing for a virtual raw material / semi-product*
- *Manual price for a virtual raw material and quantity*

- *Link to a material catalogue from CADENAS*
- *Search criteria of materials*
- *Takeover of the selected material into the quotation costing under process*

- *Explain YA00 conditions in the SD pricing procedure*
- *Create quotation*

Integration of Atlas 9000

Advantages of the OSCo Quotation Costing (1)

- Submission of quotes without having to define complete data structures before and without Excel / Access tables
- The quotation costing calculates „automatically“(sets of rules). Only the particularities of requests must be input in prepared screens.
- After placing of orders the master data (also multi-step), routings, and BOMs are generated automatically
- Integration of SAP functionalities (CO, SD, MM, and PP) by direct call
- Costing versions for scale price costings and for representation of different production alternatives
- Takeover of the quotation in a later SD order by maintaining the conditions and the link to the unit costing

Advantages of the OSCo Quotation Costing (2)

- Manual maintenance of master data can be omitted
- Support for creation (e.g. takeover of reference operation sets or routings)
- Transparency and reliability of product cost data
- Navigation across all production levels of the costing structure (production levels without master data structure)
- Scale quantities in versions
- Costing proportions and conditions in one overview
- Takeover of data from nesting systems
- Traceability of changes (costings/quotations)

The Technique of the OSCo Quotation Costing

- The OSCo Quotation Costing is available immediately,
 - usable from SAP release 4.7,
 - and upward compatible to SAP ECC 5.0 and ECC 6.0
- The delivery is done by a transport request, which can be imported easily with SAP tools
- Test deliveries can be arranged
- All objects are developed in a namespace reserved at SAP
- The systematics via the SAP configuration is not compulsory
- A later multi-step generation of master data requires the OSCo MasterData Trigger (own price list component)

Agenda

- Presentation OSCo / Company & Procedure
- Philosophy of the OSCo Quotation Costing / Master Data Generation
- Presentation of 3 scenarios
 - Costing with Assembly (based on pieces)
 - Costing with Virtual Components
 - Costing with Master Data Generation
- Integration of CADENAS and ATLAS 9000 into the OSCo Quotation Costing
 - Construction BOMs with ATLAS 9000
 - Supplier Catalogues with CADENAS
