

Clifa® installation ...

Installation

The receiving hole is punched, lasered or drilled **but not deburred or countersunk**.

With punched holes, Clifa® is pressed in from the punching burr side. The press-in process takes place on a plane parallel basis using a customary press with adjustable pressure level, until the surface of the shoulder in the Clifa® pressin nut comes to rest flat against the surface of the sheet metal.

In the case of the Clifa®-SP/SPD/SPS stud, the head must be fully pressed in and come to rest flush with the surface of the sheet metal.

Pressure which is too high or applied only on one side as well as inclined support surfaces must be avoided wherever possible.

Examples for mounting

Press-in nut Clifa®

Press-in stud Clifa®-SP

Fig. 8

Special request

short length
standoff bushings for metals
standoff bushings for plastics
threaded press-in stud
Flush surface on the press-in side of the nut element (/- thread closed on one side)
Grub screw for thin sheet thicknesses
Grub screw for high load values
threaded press-in stud for lower press-in force

We recommend

Clifa®-M	(Works Standard 500 0 to 503 0)
Clifa®-AM	(Works Standard 503 8 to 525 8)
Clifa®-AL	(Works Standard 503 6 to 525 6)
Clifa®-ABO/-ABG	(Works Standard 570 0 to 571 0)
Clifa®-SPD	(Works Standard 5.. 2)
Clifa®-SA	(Works Standard 515 4 to 534 4)
Clifa®-SAD	(Works Standard 515 9 to 534 9)

Press-in stud
Press-fit geometrie processed protruding at the head

Clifa®-SAD
Works Standard
506 9 to 534 9

Application

Clifa®-SAD press-in grub screws are processed protruding at the head – see diagram –, and are used to manufacture wear-resistant, highly resilient screw connections in thin-walled moulded parts made of:

- Steel
- Stainless steel
- Brass
- Copper
- Light metal, etc.

Due to the low height of the serrations, Clifa®-SAD is suitable for use in lower moulding strengths than necessary with Clifa®-SA.

Clifa®-SAD has a strengthened head shape, making it more resilient to threading than Clifa®-SPD.

Dimensions in mm

Article number	Internal thread	Workpiece thickness	External diameter	Head height	Hole diameter	Minimum spacing	Tightening torque of the nut (guideline values for sheet metal) ≤ Nm
	A	≥ M	E	K ±0,1	L +0,1	≥ W

5.. 900 080 ...	M 8	1,2	12,5	1,75	8	12,5	25,0
5.. 900 100 ...	M 10	1,2	15,7	2,2	10	13,5	36,0

Article number first group of digits (selection series)	Length B*) ±0,2	Available			
		M 5	M 6	M 8	M 10
510 900	10,0	X	X		
512 900	12,0	X	X	X	
515 900	15,0	X	X	X	X
520 900	20,0	X	X	X	X
525 900	25,0	X	X	X	X
530 900	30,0	X	X	X	X
534 900	34,0	X	X	X	X

Example for finding the article number

Press-in stud Clifa®-SAD, M5 made of tempered, zinc plated and blue passivated steel, 20 mm long: Clifa®-SAD 520 900 050.110

Materials

Steel tempered, zinc plated, blue passivated **
Steel tempered, zinc/nickel plated, transparent passivated **
Stainless steel

Article no. (fourth group of digits) 110
Article no. (fourth group of digits) 143
Article no. (fourth group of digits) 500

Other dimensions on request

Threaded ends

Press-in stud with several dog points on request. See data sheet on page 25.

Tolerances

ISO 2768-m

Thread

Stud thread A: as per ISO 6g

Press-in force

Guideline values for press-in force, see page 24

***) Length B**

available up to 60 mm

****)**

Press-in stud in tempered steel, available in customary strength classes.

Animation

Dimensions in mm

Anvil for: Clifa®	Hole L1 +0,1	Countersink for serrations N +0,1	Press-in force kN
M 2,5	2,6	3,4	8,9 to 12
M 3	3,1	4,0	10,5 to 19
M 4	4,1	5,2	16 to 25
M 5	5,1	6,4	29 to 35
M 6	6,1	7,6	30 to 50
M 8	8,1	10,2	30 to 60

The press-in force F is dependent on the Clifa® dimension, the material and the thickness of the shaped component and also the type of serration at the head. The Clifa® head must be fully embedded and must come to rest flush with the surface of the sheet metal. Excessive force must be avoided. The hole diameter of the part to be screwed on $\approx A +0,6$ mm.

Dimensions in mm

Anvil for: Clifa®	Hole L1 +0,1	Countersink for serrations N +0,1	Press-in force kN
Ø 5,0	5,1	6,4	29 to 35

The press-in force F is dependent on the Clifa® dimension, the material and the thickness of the shaped component and also the type of serration at the head. The Clifa® head must be fully embedded and must come to rest flush with the surface of the sheet metal. Excessive force must be avoided. The hole diameter of the part to be screwed on $\approx A +0,6$ mm.

Dimensions in mm

Anvil for: Clifa®	Hole L1 +0,1	Countersink for serrations N +0,1	Press-in force kN
M 3	3,1	4,0	9,0 to 15,0
M 4	4,1	5,2	14,5 to 38
M 5	5,1	6,4	21 to 42
M 6	6,1	7,6	21 to 50
M 8	8,1	10,2	21 to 60
M 10	10,1	12,2	32 to 84

The press-in force F is dependent on the Clifa® dimension, the material and the thickness of the shaped component and also the type of serration at the head. Excessive force must be avoided. The hole diameter of the part to be screwed on $\approx A +0,6$ mm.

Application

Depending on the demands placed on the Clifa® press-in grub screws, we offer a variety of threaded ends. Further threaded ends on request.

Sub-function	Type of threaded end			
	KKV	KK	PN	KK-MAG
Protection of start of thread	↘	↗	↗	↗
Larger displacement when fastening	↘	→	↗	↗
Prevention of tilting when fastening	↘	→	→	↗
Usable thread length (Version for components of the same length)	↗	→	→	↘

Type of threaded end: **KKV**
DIN EN ISO 4753 (RL)

Type of threaded end: **KK**

Type of threaded end: **PN**

Type of threaded end: **KK-MAG**
